Profile

After working for more than 12 years with dedication and pleasure in a corporate and business environment, I chose for a study into psychology. Finding and developing my passion for truly understanding people and their relationships, I embarked on a journey leading me deep into psychoanalytic and systemic perspectives on how our personalities develop. I gained more insight and compassion for human nature and learned how to help and support people in the process towards self knowledge and thereby more fulfilling lives, relationships and professional careers. Conducting research helped challenging assumptions and beliefs, clear thinking and met intellectual curiosity as did other roles in organisations. I enjoy working with people, as colleagues, teachers, students and clients. In my own practice *Festina Lente* my two worlds of work experience meet: that of the business environment and that of psychology and development. My personal style of interaction can be described as serious, analytical, thoughtful, loyal and always ready to add some humor and lightness in the process.
